

Connie and Ed Railsback: Built in 2008, this pond is 10' x 14' x 3' deep and around 2000 gallons. Although new, it looks like its been there forever. Built right off the back of the house and close to the patio makes this pond very easy to enjoy. This is the "basic" pond type that is easy to construct and is a project that can easily enhance any landscape. Lots of plants and active fish make this a yard to thoroughly relax in. What a treat to come home to.

Our Bonus Pond belongs to Mother Nature:

On the northern shore of Lake MacBride lies one of Mother Nature's fantastic paintings. The bays here are full of beautiful yellow wild American Lilies (or lotus). During the first weeks of July this area can be in full bloom with thousands of 6-8 inch flowers. We can't top Mother Nature. Be sure to stop for some natural beauty.

Down to the end of Opie Ave. -Solon

Karen and David Frieden: The owners installed this pond themselves about 8 years ago. The pond has a rubber liner and is roughly 3,400 gallons. The surrounding shade gardens in combination with the pond make this a sight to see. The pond is built into the hill side and easily viewed from the owner's elevated deck. Lilies, lotus, cattails, waterfall,s and fish make this the perfect spot to rest and regenerate at the end of the day.

2791 Jeremy CT NW - Swisher

Karen and Milo Popp Jr.: The owners built this pond in 2003 after going through the normal growing pains of rebuilding several times because it was "too little". Rubber lined with a 10-15' waterfall and stream, this pond is wonderfully landscaped with numerous perennials. Daylilies, asst. grasses, bushes, sumac, and flowers galore surround it. An elevated deck oversees the whole kingdom, making it the ideal spot to watch the world go by.
